## RESEARCH EXPERIENCE & EMPLOYMENT

---

research interests: mesoscale turbulence, energy cascades, deep ocean dynamics, remote sensing, autonomous platforms, sea level variability

### Woods Hole Oceanographic Institution

Postdoctoral Investigator

Woods Hole, MA

May 2020 – present

- Analyze and synthesize observations of eddy kinetic and potential energy in a scale-aware consistent manner to improve mesoscale eddy representation and parameterization in global climate models. This work also considers large scale temperature and salinity structure as related to eddy mixing. A main focus is the joint analysis of observational and model data. (Ocean Transport and Eddy Energy Climate Process Team w/ Sylvia Cole)
- Investigate global and regional patterns in sea level rise and identify physical drivers of these observed trends using current ocean state estimates (ECCO). Space borne gravimetric measurements of ocean bottom pressure are also employed to explore ocean heat content changes. (Oct. 2021 - present; NASA-OSTST w/ Christopher Piecuch)

### University of Washington

Graduate Research Assistant

Seattle, WA

September 2013–March 2020

- Studied ocean eddy radial-vertical structure, evolution, and decay with a specific focus on geostrophic turbulence, energy cascades, and the surface expression of interior motions.
