RESEARCH EXPERIENCE & EMPLOYMENT

interests: mesoscale turbulence, eddy vertical structure, scale dependent energy cascades, deep-ocean dynamics, remote sensing, sea level, ocean heat uptake, gliders

N.O.A.A. Geophysical Fluid Dynamics Laboratory

Research Physical Scientist

Princeton, NJ

Apr. 2023 – present

- Member of the Ocean and Ice Division focused on improving understanding of physical drivers of coastal sea level variability and representation in models.

Woods Hole Oceanographic Institution

Postdoctoral Investigator

Woods Hole, MA

May 2020 – Apr. 2023

- Analyzed and synthesized diverse set of observations of eddy kinetic and potential energy in a scale-aware, consistent manner to improve mesoscale eddy parameterizations in global climate models. Considered large scale density structure as related to eddy formation and mixing. A main focus was the joint analysis of observational and model data. (Ocean Transport and Eddy Energy Climate Process Team w/ S. Cole)
- Investigated regional patterns of sea level variability. Focused on physical/dynamical relationships among ocean warming, coastal sea level, and ocean bottom pressure trends. Analyses employed model output (ECCO) and observational data (altimetry, gravimetry, profiling floats, tide gauges). Specifically interested in the oceanic response to heat content changes. (Oct. 2021 - Apr. 2023; NASA-OSTST w/ C. Piecuch)
